

1.7 Systems of linear equations (HL)

Number and algebra · IB Diploma · Concept guide and original exam-style practice

Understand the concept

A system of linear equations can be solved using Gaussian elimination (row-reduction to echelon form) or a GDC. A system in 3 unknowns may have a unique solution (planes meet at one point), no solution (inconsistent, e.g. parallel planes), or infinitely many solutions (planes meet in a line, expressed with a parameter). Row operations (swap rows, scale a row, add a multiple of one row to another) preserve the solution set.

Worked example: follow the reasoning

Solve the system: $x+y+z=6$, $2x-y+z=3$, $x+2y-z=2$.
From eq1: $z=6-x-y$. Substitute into eq2: $2x-y+6-x-y=3 \rightarrow x-2y=-3$ (i).
Substitute z into eq3: $x+2y-(6-x-y)=2 \rightarrow 2x+3y=8$ (ii).
From (i): $x=2y-3$. Sub into (ii): $2(2y-3)+3y=8 \rightarrow 4y-6+3y=8 \rightarrow 7y=14 \rightarrow y=2$.
Then $x=2(2)-3=1$, $z=6-1-2=3$.
Solution: $x=1$, $y=2$, $z=3$.

Quick check · multiple choice

A system of three linear equations in three unknowns has no solution. Geometrically the three planes:

- A Meet at a single point
- B Meet along a common line
- C Have no common point (e.g. two are parallel)
- D Are all identical

Write your choice: _____

Structured practice

Answer in the space provided. Show working and units where relevant.

- 1 Solve the system for x , y , z , or state whether it has no solution or infinitely many: [6]

$$\begin{aligned}x+2y-z &= 1 \\ 2x-y+3z &= 8 \\ 4x+3y+z &= 10\end{aligned}$$

Final answer: _____

Answers and explanation

Question 1 [6]

From eq1: $x=1-2y+z$. Substitute into eq2: $2(1-2y+z)-y+3z=8 \rightarrow 2-4y+2z-y+3z=8 \rightarrow -5y+5z=6$ (i).

Substitute into eq3: $4(1-2y+z)+3y+z=10 \rightarrow 4-8y+4z+3y+z=10 \rightarrow -5y+5z=6$ (ii).

Equations (i) and (ii) are identical, so the system is dependent: infinitely many solutions, forming a line of intersection, parametrised e.g. by $z=t$: $y=t-6/5$, $x=1-2(t-6/5)+t=1-2t+12/5+t=17/5-t$.

Quick check answer

C. An inconsistent system corresponds to planes with no common point of intersection.

Self-assessment

Compare each credited step with your own answer. Fix the first reasoning or content error, then retry the practice question without looking at the solution.
