

3.5 Trigonometric identities and equations

Geometry and trigonometry · IB Diploma · Concept guide and original exam-style practice

Understand the concept

Key identities: Pythagorean identity $\sin^2\theta + \cos^2\theta = 1$ (and derived $\tan^2\theta + 1 = \sec^2\theta$); double angle formulas $\sin(2\theta) = 2\sin\theta\cos\theta$, $\cos(2\theta) = \cos^2\theta - \sin^2\theta = 2\cos^2\theta - 1 = 1 - 2\sin^2\theta$; $\tan\theta = \sin\theta/\cos\theta$. To solve trig equations over a given domain, use identities to reduce to a single function, find the principal value, then use the unit circle/graph symmetry to find all solutions in range.

Worked example: follow the reasoning

Solve $2\cos^2x - 1 = 0$ for $0 \leq x \leq 2\pi$.

$\cos^2x = 1/2$, $\cos x = \pm 1/\sqrt{2}$.

$x = \pi/4, 3\pi/4, 5\pi/4, 7\pi/4$ (all four quadrant solutions where cosine is $\pm 1/\sqrt{2}$).

Quick check · multiple choice

Simplify $\sin(2x) / (2\sin x)$ for $\sin x \neq 0$.

- A $\cos x$
- B $\sin x$
- C $2\cos x$
- D $\tan x$

Write your choice: _____

Structured practice

Answer in the space provided. Show working and units where relevant.

- 1 (a) Show that the equation $\cos(2x) + 3\cos x - 1 = 0$ can be written as $2\cos^2x + 3\cos x - 2 = 0$. [7]
- (b) Hence solve $\cos(2x) + 3\cos x - 1 = 0$ for $0 \leq x \leq 2\pi$, giving exact or 3 s.f. answers.

Final answer: _____

Answers and explanation

Question 1 [7]

(a) $\cos(2x) = 2\cos^2x - 1$, so equation becomes $2\cos^2x - 1 + 3\cos x - 1 = 0 \rightarrow 2\cos^2x + 3\cos x - 2 = 0$.

(b) Let $c = \cos x$: $2c^2 + 3c - 2 = 0 \rightarrow (2c - 1)(c + 2) = 0 \rightarrow c = 1/2$ or $c = -2$ (rejected, outside $[-1, 1]$).
 $\cos x = 1/2 \rightarrow x = \pi/3$ or $x = 2\pi - \pi/3 = 5\pi/3$ (in $[0, 2\pi]$).

Quick check answer

A. $\sin(2x) = 2\sin x \cos x$, so $\sin(2x)/(2\sin x) = 2\sin x \cos x/(2\sin x) = \cos x$.

Self-assessment

Compare each credited step with your own answer. Fix the first reasoning or content error, then retry the practice question without looking at the solution.
