

Views, attitude and inference

Component 1 · Exercise 4 · 6 marks | syllabus 2027-2029

Learning focus

Choose between three plausible options by tracking change of opinion, implied meanings and evidence.

Identify a change of mind

Watch markers such as at first, then, however and later. A writer may start disappointed and end convinced. In a multiple-choice item, an option can mention a true detail but misstate the overall attitude.

Worked example

The narrator initially wanted animal contact, but later understood why cleaning and labelling matter. The final attitude is respectful, not disappointed.

Separate evidence from assumption

Use the whole passage to decide an implied conclusion. Eliminate a distractor that introduces an extreme claim or confuses an intention with an event. Each of the six items has three choices and one mark.

Worked example

The caller did not take the young bird away. Staff first checked whether its parents might still be caring for it.

Practice paper

Views, attitude and inference

Learning to work at a wildlife centre

When I saw an advertisement for weekend volunteers at the Brookside Wildlife Centre, I imagined feeding foxes and releasing birds into the forest. The training session changed my expectations. Our first job was to wash food containers and write clear labels for stored supplies. I was disappointed for about ten minutes. Then a member of staff explained that accurate labels prevent animals receiving the

wrong food, and I began to see how routine work supports the exciting parts.

On my second weekend, I helped prepare a quiet room for injured birds. We kept the lights low and spoke softly. Visitors sometimes asked why they could not see the birds up close. I used to think a good centre would let everyone observe them, but I learned that unnecessary noise can slow recovery. Once the animals are well enough, specialists decide when and where to release them.

The centre also visits schools. A staff member showed me how she presents photographs of local habitats rather than bringing a nervous animal into a busy classroom. Her lesson asked students to notice signs of wildlife on ordinary streets and to think about litter and safe places for nesting. I enjoyed helping pupils make small observation sheets, even though I had expected to spend every weekend outdoors.

One day a caller reported an apparently abandoned young bird. I wanted to collect it immediately. The centre worker asked several questions first and explained that its parents might still be feeding it nearby. She advised the caller to watch from a distance. Later we heard that the bird had moved to a safer branch. I realised that helping an animal sometimes means leaving it alone.

Volunteering has made me more patient. Cleaning takes longer than a photograph of a released animal might suggest, and some animals need weeks of care. I do wish the centre had more people on busy weekends, because experienced staff have to answer calls while supervising us. Nevertheless, the team never rushes a decision merely to give visitors a dramatic moment.

I have kept a record of what I learn after each visit. The surprising thing is that the entries I value most are about choices I did not make: not opening a cage just to look, not collecting a healthy bird, and not treating a quick result as the only measure of success. Next term I hope to train new volunteers. I would begin with those food labels, which once seemed so unimportant to me.

My family has asked why I keep going back when I do not always see an animal. I tell them about the careful discussion before every decision and the simple routines that protect the centre's patients. Last week, for example, we compared two possible quiet rooms and chose the one farther from the entrance, even though it took longer to carry supplies there. A new volunteer asked whether that small difference mattered. The member of staff described how a bird reacted to noise and asked us to imagine a whole afternoon of doors opening nearby. I could finally explain the reasoning in my own words. I still enjoy the rare release days, but I am no longer disappointed when the work is mostly quiet. Some visitors now ask me how they can help, and I tell them that reliable regular support is especially useful.

Read the blog and answer Questions 1–6. For each question choose A, B or C.

1. Why did the narrator begin to value labels? [1]

- A They made the containers attractive
- B They helped prevent feeding errors
- C They allowed visitors to enter the room

Answer: _____

2. Why were injured birds kept away from visitors? [1]

- A Noise could affect recovery
- B The centre had no visitor room
- C Staff wanted photographs for schools

Answer: _____

3. What surprised the narrator about school visits? [1]

- A An animal had to be carried to every class
- B Pupils were not allowed to ask questions
- C Photographs could be used instead of live animals

Answer: _____

4. What did the bird caller learn? [1]

- A A young bird may still be supported by its parents
- B Every young bird must be collected immediately
- C The centre would release the bird that day

Answer: _____

5. How does the narrator now judge the centre's work? [1]

- A Only rapid releases count as success
- B Careful restraint can be valuable
- C Cleaning is less important than photographs

Answer: _____

6. Which future role would the narrator like? [1]

- A Training new volunteers
- B Leading the school visits alone
- C Building a larger visitor room

Answer: _____

Answers and explanations

1. B [['They made the containers attractive', 'They helped prevent feeding errors', 'They allowed visitors to enter the room']]. Labels stop animals receiving the wrong food.

2. A [['Noise could affect recovery', 'The centre had no visitor room', 'Staff wanted photographs for schools']]. Noise can slow an injured bird's recovery.

3. C [['An animal had to be carried to every class', 'Pupils were not allowed to ask questions', 'Photographs could be used instead of live animals']]. The staff member used photographs of habitats rather than bringing an animal.

4. A [['A young bird may still be supported by its parents', 'Every young bird must be collected immediately', 'The centre would release the bird that day']]. The worker suggested watching because the parents might still be feeding the bird.

5. B [['Only rapid releases count as success', 'Careful restraint can be valuable', 'Cleaning is less important than photographs']]. The narrator now sees that not intervening can be responsible care.

6. A [['Training new volunteers', 'Leading the school visits alone', 'Building a larger visitor room']]. The narrator hopes to train new volunteers next term.

Checking your work

Read the question again after finding the evidence. Do not add a second, conflicting answer. For multi-point questions, count distinct details.

Assessment structure: Cambridge IGCSE English as a Second Language (Count-in Speaking) 0511 syllabus for 2027–2029, <https://www.cambridgeinternational.org/Images/721343-2027-2029-syllabus.pdf>. Original passages, prompts and scripts by FagusED. June 2026 papers and mark schemes supplied by the user informed presentation. Independent practice material, not an official Cambridge paper.
